DataNub

A layer for Intelligent Enterprise

Author: Dr. Sarveshvaran R

Date: January, 10, 2026

The Challenge

- Enterprises run hybrid landscapes with multiple identity providers.
- Manual provisioning and fragmented authentication increase risk.
- Users demand seamless single sign-on (SSO) across SAP and non-SAP apps.

Solution – SAP Cloud Identity Services

- Provides cloud-based identity authentication and provisioning.
- Enables secure SSO across SAP and third-party applications.
- Simplifies user lifecycle management with automated workflows

Key Features

- Identity Authentication: Secure login, SSO, and multifactor authentication.
- Identity Provisioning: Automated user onboarding, role assignment, and deprovisioning.
- Integration: Connects with SAP BTP, SuccessFactors, S/4HANA, and external apps.
- Federation: Supports SAML, OAuth, and OpenID Connect for cross platform access.
- User Experience: Centralized login pages and branding for consistent UX.

Benefits & value

Metric	Value
Onboarding speed	50% faster
IT workload	Consolidated identity
Security	MFA authentication
Productivity	Seamless SSO

- 50% faster onboarding with automated provisioning.
- Reduced IT workload by consolidating identity management

Strategic Impact

- Strengthens enterprise security posture.
- Build trust with regulators and stakeholders.
- Positions organizations to scale securely in hybrid and cloud environments
